

△CS Layer 1

Governance-Discipline Interface Layer

Document ID	△CS-GOV-L1-GDIL	Version	1.0
Status	Active	Effective Date	July 2026
Classification	Governance Framework — Restricted		
Supersedes	N/A (inaugural version)		
Maintained By	Interface Protocol Officer (IPO) / Governance Secretariat		
Next Review	Annually from Effective Date, or following any structural change to the △CS stack		

Preamble

This document constitutes the ratified specification for Layer 1 of the Triangulated Coherent Systems (△CS) governance stack. It defines the Governance-Discipline Interface Layer (GDIL) in its full operational, structural, and procedural dimensions. All registered △CS disciplines and governance bodies are bound by its provisions from the Effective Date. Amendments are subject to the conditions specified in Section 10.

1. Layer Identity

Attribute	Specification
Layer Designation	Governance-Discipline Interface Layer (GDIL)
Abbreviation	GDIL
Altitude	Layer 1 — Lowest Governance Altitude; closest to discipline operations
Primary Function	Translates governance directives into discipline-actionable instructions; surfaces discipline intelligence upward into governance deliberation
Position in Δ CS Stack	Immediately above the Discipline Operational Layer; immediately below the Cross-Discipline Coherence Layer (Layer 2)
Communication Direction	Bi-directional: downward (governance-to-discipline) and upward (discipline-to-governance)
Lateral Communication	Not permitted at this layer without Coherence Layer mediation

1.1 Position in the Δ CS Governance Stack

The table below illustrates the relative position of the GDIL within the full Δ CS governance altitude hierarchy. Layer 1 represents the interface boundary at the base of the governance structure.

Layer	Designation	Relative Position
Layer 7	Governance-Level Invitation/Exclusion Layer	Highest Governance Altitude
Layer 6	Governance-Level Evaluation Layer	
Layer 5-3	[Reserved upper governance layers]	

Layer	Designation	Relative Position
Layer 2	Cross-Discipline Coherence Layer	Immediately above GDIL
Layer 1	Governance-Discipline Interface Layer (GDIL) ← <i>This Document</i>	Lowest Governance Altitude
[Operational]	Discipline Operational Layer	Below GDIL (non-governance)

2. Purpose and Scope

2.1 Purpose

The Governance-Discipline Interface Layer (GDIL) is the foundational membrane through which the Δ CS governance apparatus communicates with, and receives intelligence from, all registered discipline domains. It exists to ensure that governance decisions are not merely transmitted but are rendered actionable within the specific operational context of each discipline, and that discipline-level knowledge is not absorbed or suppressed before reaching governance deliberation.

The GDIL is neither a governance body nor a discipline unit. It is a structured interface mechanism with defined inputs, outputs, protocols, and authority limits. Its integrity is essential to the coherence of the entire Δ CS framework.

2.2 Scope

This document applies to:

- All governance bodies operating within the Δ CS framework that issue directives affecting one or more registered disciplines;
- All disciplines formally registered within the Δ CS system at the time of this document's Effective Date and any subsequently registered disciplines;

- All interface officers, discipline liaisons, and secretariat personnel performing functions specified in Section 8; and
- The Cross-Discipline Coherence Layer (Layer 2) insofar as it mediates escalations or lateral signals originating at Layer 1.

2.3 Dual Mandate

The GDIL operates under a dual mandate, with equal institutional weight assigned to each direction of flow:

1. **Downward Translation:** The GDIL receives governance decisions from deliberative bodies and reframes them as discipline-specific directives, calibrated to each discipline's operating context, terminology, and capacity.
2. **Upward Relay:** The GDIL aggregates signals from discipline operations—including capacity assessments, friction reports, innovation notices, and constraint notifications—and packages them for structured governance review without distortion or omission.

3. Core Functions

3.1 Governance Directive Translation

The GDIL receives formal governance decisions issued by Governance Deliberative Bodies and performs the following translation operations:

3. **Contextual Calibration:** Each directive is evaluated against the operating norms, terminology, and structural realities of the receiving discipline. The directive is reformatted accordingly without altering its substantive intent.
4. **Fidelity Verification:** Prior to dispatch, the translated directive is verified against the original governance decision by the Interface Protocol Officer to confirm that no material distortion has occurred.

5. **Directive Dispatch:** The calibrated directive is issued to the relevant Discipline Liaison, accompanied by the original governance decision reference number and any applicable escalation thresholds.
6. **Receipt Confirmation:** The Discipline Liaison confirms receipt and records acknowledgment in the Interface Protocol Register.

Refer to the Governance Translation Matrix (GTM) for directive type mapping rules. See Section 4.2.

3.2 Discipline Intelligence Relay

The GDIL is responsible for the structured aggregation and upward transmission of discipline-level intelligence. This function encompasses:

7. **Signal Collection:** Each Discipline Liaison submits intelligence through the Discipline Signal Dashboard (DSD) prior to each governance deliberative session. Signal categories include: operational capacity, identified friction points, innovation or emergence signals, and active constraints.
8. **Aggregation:** The Interface Protocol Officer aggregates DSD submissions across all registered disciplines into a consolidated governance intelligence package.
9. **Transmission:** The consolidated package is submitted to the Governance Secretariat for routing to the appropriate deliberative body, in advance of scheduled deliberation.
10. **Signal Integrity:** No discipline signal may be withheld, summarised to the point of distortion, or de-prioritised on the basis of subject matter without explicit governance instruction. All signals received are logged in the Interface Protocol Register.

Refer to the Discipline Signal Dashboard (DSD) format. See Section 4.3.

3.3 Interface Protocol Management

The GDIL maintains an active register of Interface Protocols for each registered discipline. Protocol management functions are as follows:

11. Protocol Registration: Each discipline is assigned an Interface Protocol upon formal registration in the Δ CS system.

12. Protocol Content: Each Interface Protocol specifies, at minimum:

- Entry conditions for receiving governance directives;
- Escalation thresholds for rejected or contested directives;
- Communication cadence between the GDIL and the discipline; and
- Resolution pathways for interface disputes.

13. Protocol Review: All Interface Protocols are reviewed each formal governance cycle, as specified in Section 7.

14. Protocol Updates: Amendments to individual Interface Protocols are logged in the Interface Protocol Register with version number, amendment rationale, and authorising officer.

Refer to the Interface Protocol Register (IPR). See Section 4.1.

3.4 Authority Boundary Enforcement

The GDIL enforces the boundary between governance authority and discipline autonomy as defined in the Authority Boundary Charter (ABC). Enforcement operates in both directions:

15. Prevention of Governance Overreach: The GDIL shall not transmit any governance directive that instructs, mandates, or implies authority over the internal operational logic of a discipline, unless such authority has been explicitly granted by the ABC or a supermajority governance decision.

16. Prevention of Discipline Insulation: The GDIL shall not recognise or process a discipline's claim of immunity from a legitimate

governance directive. Where a discipline disputes the legitimacy of a directive, the matter is escalated per Section 9; the directive remains conditionally pending during escalation review.

17. **Boundary Log:** All boundary determinations made by the GDIL are logged in the Interface Protocol Register with the relevant governance cycle, the parties involved, and the determination outcome.

Refer to the Authority Boundary Charter (ABC). See Section 4.4.

4. Structural Components

The GDIL is constituted by four structural components. Each is a distinct instrument with defined form, custodianship, and update cadence. Together they form the operational infrastructure of this layer.

4.1 Interface Protocol Register (IPR)

The Interface Protocol Register is the living administrative record of all active discipline interface protocols within the Δ CS system. It is the primary accountability instrument of the GDIL.

Attribute	Detail
Nature	Living register; updated each governance cycle
Contents	One protocol entry per registered discipline; version history per entry; log of all boundary determinations and signal receipt confirmations
Custodian	Interface Protocol Officer (IPO)
Access	Available to Governance Secretariat, Discipline Liaisons, and Layer 2 Coherence Officers; restricted to external parties
Update Trigger	Each governance cycle review; upon

Attribute	Detail
	discipline registration or deregistration; upon any escalation determination

4.2 Governance Translation Matrix (GTM)

The Governance Translation Matrix is a structured mapping instrument that cross-references governance directive types against discipline-specific adaptation rules.

Attribute	Detail
Nature	Structured reference matrix; versioned document
Contents	Directive type taxonomy; adaptation rules per discipline class; fidelity verification checklist; prohibited translation operations
Custodian	Interface Protocol Officer (IPO)
Access	Interface Protocol Officer and Governance Secretariat; made available to Discipline Liaisons for reference
Update Trigger	New directive type identified; new discipline registered; following annual Authority Boundary Charter review

4.3 Discipline Signal Dashboard (DSD)

The Discipline Signal Dashboard is the standardised reporting format through which each discipline submits intelligence to the GDIL for upward relay to governance.

Attribute	Detail
Nature	Structured submission template; completed per governance cycle by each Discipline Liaison

Attribute	Detail
Signal Categories	Operational capacity; friction points; innovation and emergence signals; active constraints
Custodian	Discipline Liaison (completion); Interface Protocol Officer (aggregation); Governance Secretariat (receipt and routing)
Submission Deadline	Prior to each governance deliberative session, per cadence defined in Section 7
Escalation Trigger	Non-submission or non-acknowledgement for 2 consecutive cycles triggers flag to Layer 6

4.4 Authority Boundary Charter (ABC)

The Authority Boundary Charter is the ratified constitutional instrument of the GDIL. It defines the non-negotiable demarcation between governance authority and discipline autonomy.

Attribute	Detail
Nature	Ratified governance document; not subject to unilateral amendment
Contents	Enumeration of governance authority domains; enumeration of discipline autonomy domains; prohibited encroachment scenarios; dispute resolution reference
Ratification	Requires agreement of all registered disciplines and a supermajority governance decision
Custodian	Governance Secretariat (holding); Interface Protocol Officer (operational reference)
Review Cadence	Annually; or following any structural change to the Δ CS governance stack

5. Operating Principles

The following five principles govern all activities conducted at this layer. They are not aspirational guidelines; they are binding operational standards. Any GDIL action that contravenes one or more of these principles is void and subject to review under Section 9.

#	Principle	Operational Definition
1	Fidelity	All downward translations of governance directives must preserve the original intent of the issuing governance body. No calibration, reformulation, or contextualisation shall alter the substantive meaning or obligation of the directive. Where fidelity cannot be maintained, translation is suspended and the directive is returned to the issuing body for clarification.
2	Transparency	All interface activities—directive translations, signal transmissions, boundary determinations, and escalations—are logged in the Interface Protocol Register and are auditable by authorised Δ CS governance personnel. No GDIL action may be taken off-record.
3	Proportionality	The weight, urgency, and scope of a governance directive as issued to a discipline must be proportionate to

#	Principle	Operational Definition
		the impact of that directive on the discipline's operations. Directives of broad impact require more extensive contextual calibration; directives of narrow impact are transmitted with minimal reformulation. Over-amplification and under-statement are both prohibited.
4	Reciprocity	Upward discipline intelligence and downward governance directives carry equal institutional weight within this layer. No directional flow is treated as primary or secondary. The GDIL shall not deprioritise a discipline signal on the basis that it is inconvenient to or in tension with current governance direction.
5	Non-intrusion	Governance does not colonise discipline operational logic. The GDIL exists at the boundary of discipline operations, not within them. No directive transmitted by the GDIL shall seek to direct, restructure, or constrain the internal processes, methods, or organisational structures of a discipline unless explicitly authorised by the Authority Boundary Charter.

6. Interaction Rules

6.1 Permitted Inputs to the GDIL

The GDIL accepts inputs from exactly two sources. Inputs from any other source are invalid and shall not be processed.

- 18. **Governance Deliberative Bodies:** Formal governance decisions, directives, and queries issued through the established governance decision-making process of the Δ CS framework.
- 19. **Discipline Operations (via Discipline Liaisons):** Intelligence signals, capacity reports, constraint notifications, and DSD submissions originating from registered Δ CS discipline operations.

Restriction Notice

The GDIL does not accept inputs from external parties, non-registered bodies, individual discipline members acting outside their liaison role, or any entity operating outside the Δ CS governance stack. Any such input received shall be logged and returned without processing, with a formal notice to the Governance Secretariat.

6.2 Permitted Outputs from the GDIL

The GDIL issues outputs to exactly two destinations:

- 20. **Discipline Operations (downward):** Translated and calibrated governance directives, directive acknowledgement requests, and escalation notifications.
- 21. **Cross-Discipline Coherence Layer — Layer 2 (upward):** Aggregated intelligence packages (compiled from DSD submissions), escalation referrals, and boundary contestation notices.

6.3 Prohibition on Lateral Communication

No lateral communication between disciplines is permitted at this layer. Where a matter requires inter-discipline coordination, it must be escalated to the Cross-Discipline Coherence Layer (Layer 2), which holds sole authority to mediate lateral interactions. Direct discipline-to-discipline communication through the GDIL is a structural violation of the Δ CS framework and shall be flagged and logged accordingly.

7. Cadence and Review

Activity	Cadence	Responsible Party
Interface Protocol Review (all active protocols)	Each formal governance cycle	Interface Protocol Officer
Discipline Signal Dashboard (DSD) submission	Prior to each governance deliberative session	Discipline Liaison (per discipline)
Intelligence Package aggregation and dispatch	Prior to each governance deliberative session	Interface Protocol Officer / Governance Secretariat
Authority Boundary Charter Review	Annually; or following any structural change to the Δ CS governance stack	Governance Secretariat (convening); all registered disciplines (participation)
Interface Protocol Register (IPR) audit	Each governance cycle; full audit annually	Interface Protocol Officer
Governance Translation Matrix (GTM) review	Following ABC review; upon identification of new directive types	Interface Protocol Officer

8. Roles and Accountabilities

Three roles carry primary accountability for the operation of this layer. These roles do not substitute for the governance bodies and discipline

operations with which they interact; they serve as interface officers operating within the GDIL.

8.1 Interface Protocol Officer (IPO)

Accountability Area	Description
IPR Maintenance	Maintains the Interface Protocol Register in its current and complete form across all governance cycles
GTM Maintenance	Maintains and updates the Governance Translation Matrix; verifies fidelity of all directive translations prior to dispatch
Intelligence Aggregation	Aggregates DSD submissions from all Discipline Liaisons into a consolidated governance intelligence package
Boundary Enforcement	Applies the Authority Boundary Charter to all translation and relay decisions; logs all boundary determinations
Escalation Initiation	Initiates escalation procedures per Section 9 where conditions are met

8.2 Discipline Liaison (per discipline)

Accountability Area	Description
DSD Completion	Completes and submits the Discipline Signal Dashboard for their discipline prior to each governance deliberative session
Directive Receipt and Verification	Receives translated governance directives; confirms receipt; verifies that translation accurately reflects governance intent in the discipline's operational context
Directive Dispute Notification	Where a translated directive is disputed or rejected by the discipline, notifies the Interface Protocol Officer within the same governance cycle; does not act unilaterally

Accountability Area	Description
Signal Accuracy	Ensures that DSD submissions accurately represent the operational reality of the discipline without strategic omission or amplification

8.3 Governance Secretariat

Accountability Area	Description
Directive Dispatch	Confirms the formal dispatch of governance directives to the GDIL; issues reference numbers for tracking within the IPR
DSD Receipt and Routing	Receives the consolidated intelligence package from the Interface Protocol Officer; routes it to the appropriate deliberative body ahead of scheduled sessions
ABC Custodianship	Holds the ratified Authority Boundary Charter; convenes annual review processes
Escalation Receipt	Receives and logs escalation referrals from the GDIL; routes to the appropriate governance layer per Section 9

9. Escalation Pathways

The following escalation pathways are binding. Each pathway is activated by a specific triggering condition. The GDIL does not exercise discretion over whether to escalate once a trigger condition is met; escalation is mandatory.

#	Triggering Condition	Escalation Pathway	Receiving Body
E-1	A discipline	Escalate to	Governance

#	Triggering Condition	Escalation Pathway	Receiving Body
	formally rejects a translated governance directive	Governance Deliberative Body via the Cross-Discipline Coherence Layer (Layer 2). Directive remains conditionally pending during review. Rejection and escalation are logged in the IPR.	Deliberative Body (via Layer 2)
E-2	A discipline signal submitted via DSD is unacknowledged by the relevant governance body for two (2) consecutive governance cycles	Flag submitted to the Governance-Level Evaluation Layer (Layer 6) via the Governance Secretariat. Interface Protocol Officer documents the signal content, submission dates, and acknowledgement status in the IPR.	Governance-Level Evaluation Layer (Layer 6)
E-3	The authority boundary between governance and a discipline is formally contested by either party	Escalate to the Governance-Level Invitation/Exclusion Layer (Layer 7) via the Governance Secretariat. The Interface Protocol Officer suspends the relevant directive pending determination. All boundary contestation records are logged in the IPR.	Governance-Level Invitation/Exclusion Layer (Layer 7)
E-4	The GDIL receives an input from an	Input is returned without processing.	Governance Secretariat (notification only)

#	Triggering Condition	Escalation Pathway	Receiving Body
	impermissible source (per Section 6.1)	Notification issued to Governance Secretariat. Event logged in IPR with source identification.	
E-5	A Discipline Liaison fails to submit a DSD for two (2) consecutive governance cycles	Non-submission flagged to the Interface Protocol Officer; escalated to Governance Secretariat with recommendation to engage the relevant discipline governance structure.	Governance Secretariat

Note on Escalation During Active Governance Cycles

Escalations do not suspend GDIL operations. All other interface functions continue during an active escalation unless the escalation determination issued by the receiving body explicitly instructs otherwise. The Interface Protocol Officer is responsible for maintaining the separation of escalated matters from ongoing GDIL activities.

10. Amendment Conditions

10.1 Amendment of This Document

The GDIL specification (this document, Δ CS-GOV-L1-GDIL) may be amended under the following conditions:

22. Amendments must be proposed in writing to the Governance Secretariat by an authorised governance body or by the Interface Protocol Officer.
23. Proposed amendments are submitted to the next scheduled governance deliberative session for formal review.
24. Amendments are adopted upon a **supermajority governance decision**, defined as the affirmative vote or assent of two-thirds or more of the authorised governance deliberative membership.
25. Adopted amendments take effect from the date specified in the amendment resolution, or from the commencement of the next governance cycle if no date is specified.
26. All amendments are issued as versioned updates to this document; the version number increments at each amendment (e.g., Version 1.0 → 1.1 → 2.0 for structural amendments).

10.2 Amendment of the Authority Boundary Charter

The Authority Boundary Charter (ABC), as the ratified constitutional instrument of the GDIL, is subject to a higher amendment threshold than this document:

27. Proposed amendments to the ABC must be submitted to all registered disciplines for review, with a minimum review period of one full governance cycle prior to the deliberative session at which the amendment will be considered.
28. Amendments to the ABC require **ratification by all registered disciplines**. No discipline may be excluded from the ratification process.
29. Amendments to the ABC additionally require a supermajority governance decision, as defined in Section 10.1.

30. Where a discipline withholds ratification and provides formal grounds, the matter is referred to the Governance-Level Invitation/Exclusion Layer (Layer 7) before the amendment proceeds further.

10.3 Emergency Amendments

In circumstances where a structural change to the Δ CS governance stack necessitates an immediate amendment to the GDIL, the Governance Secretariat may issue a provisional amendment pending full supermajority ratification. Provisional amendments:

- Must be explicitly flagged as provisional in the IPR;
- Are valid for no more than one governance cycle without full ratification; and
- Cannot be used to modify the Authority Boundary Charter under any circumstances.

Revision History

Version	Date	Author / Custodian	Summary of Changes
1.0	July 2026	Governance Secretariat	Inaugural version. Full specification of the Governance-Discipline Interface Layer (GDIL) established. All sections (1-10) ratified. Authority Boundary Charter referenced pending separate ratification instrument.

Version	Date	Author / Custodian	Summary of Changes

For each subsequent revision, record: version number, effective date, custodian or author of the amendment, and a concise description of all changes made. Superseded versions are retained in the Governance Secretariat’s document archive. Revisions to the Authority Boundary Charter are recorded separately in the ABC revision log.

Document ID: ΔCS-GOV-L1-GDIL | **Version:** 1.0 | **Status:** Active | **Effective Date:** July 2026

Classification: Governance Framework — Restricted. This document is for use by authorised ΔCS governance personnel, Interface Protocol Officers, Discipline Liaisons, and Governance Secretariat staff only. Unauthorised distribution, reproduction, or use outside the ΔCS framework is prohibited.

Revision Tracking: All amendments to this document must be recorded in the Revision History table above. Each version is assigned a version number, effective date, custodian, and summary of changes. The Governance Secretariat maintains the authoritative version history. Provisional amendments must be explicitly flagged. This document is not self-amending; no alteration is valid without the governance process specified in Section 10.

Maintained by: Interface Protocol Officer (IPO) / ΔCS Governance Secretariat | **Next**

Review: July 2027 or upon structural change to the ΔCS stack, whichever occurs first.
