Governance-Level Evaluation Layer (GLEL) — Formal Instrument of Governance

Document ID	△CS-GOV-L6-GLEL	Version	1.0
Status	Active	Effective Date	July 2026
Classification	Governance Framework — Restricted		
Supersedes	N/A (Initial Issue)	Next Scheduled Review	July 2027
Issuing Authority	△CS Governance Deliberative Body — Governance Framework Standing Committee		

Document Purpose

This instrument establishes Layer 6 of the △CS Governance Stack — the Governance-Level Evaluation Layer (GLEL). It defines the layer's identity, purpose, scope, core functions, structural components, operating principles, evaluation protocols, escalation pathways, roles, accountabilities, and amendment conditions. This document is binding upon all governance bodies, evaluation personnel, and registered disciplines operating within the △CS framework.

1. Layer Identity

Attribute	Definition
Layer Designation	Governance-Level Evaluation Layer (GLEL)
Layer Number	Layer 6 — First Governance-Level Altitude (above the cross-discipline stack)
Core Function	Governs the systematic evaluation of Δ CS governance stack performance, health, integrity, and cross-discipline outcomes
Position — Above	Cross-Discipline Generative Layer (Layer 5)
Position — Below	Governance-Level Invitation/Exclusion Layer (Layer 7)
Receives From	Escalations, performance submissions, and output records from all lower layers (Layers 1–5)
Submits To	Evaluation findings to Layer 7 and governance deliberative bodies
Altitude Class	Governance-Level (distinct from operational and cross-discipline altitudes)

Layer 6 occupies the first governance-altitude position in the Δ CS stack. It does not govern disciplines, coordinate generative activity, or manage operational protocols. Its sole mandate is to evaluate — with rigour, independence, and systemic perspective — whether the governance architecture as a whole is performing with integrity and producing value commensurate with its mandate.

2. Purpose and Scope

2.1 Purpose

The Governance-Level Evaluation Layer is Δ CS governance's self-evaluation infrastructure — the layer at which the system turns its full analytical capacity upon itself. The GLEL exists to ensure that the governance structures which govern all disciplines and generative activity are themselves subject to structured, independent, and principled evaluation.

The GLEL is distinct from operational review, which occurs within individual layers. Operational review assesses whether a layer's internal processes are functioning correctly. The GLEL evaluates whether the governance architecture as a whole is fit for purpose, functioning with integrity, and producing value commensurate with its mandate. It is a reflexive intelligence function — the mechanism by which Δ CS governance maintains systemic self-awareness.

2.2 Scope

The scope of the GLEL is comprehensive and non-negotiable. It extends to all components of the Δ CS governance ecosystem, including but not limited to:

1. All governance layers (Layers 1 through 7), evaluated individually and in aggregate;
2. All governance bodies, deliberative structures, and standing committees;
3. All escalation records generated within and between governance layers;
4. All cross-discipline generative outputs cleared via Generative Output Certificate (GOC) from the Generative Layer (Layer 5); and
5. All governance-cycle outcomes, including cycle close reports, structural decisions, and remediation actions taken in response to prior evaluation findings.

Scope Boundary — Critical Clarification

The GLEL evaluates governance architecture and governance body conduct. It does not evaluate the substantive outputs of registered disciplines, the scientific or technical merit of discipline work, or the quality of individual professional practice within disciplines. Those evaluations are governed by the appropriate lower-layer instruments. The GLEL's scope is strictly governance-systemic.

3. Core Functions

3.1 Layer Performance Evaluation

The GLEL conducts structured performance evaluations of each governance layer at defined intervals across every governance cycle. These evaluations assess whether each layer is fulfilling its designated functions, adhering to its governing protocols, responding effectively to escalations, and maintaining the confidence of the stakeholder communities it serves.

The evaluation criteria applied to each layer are:

6. **Functional delivery** — the degree to which the layer has executed its defined mandate during the evaluation period;
7. **Protocol adherence** — compliance with the procedural and structural requirements established in the layer's governing instrument;
8. **Escalation responsiveness** — the timeliness, appropriateness, and resolution quality of the layer's responses to escalations received; and

9. **Stakeholder confidence** — the assessed level of confidence held by registered disciplines, governance bodies, and governance personnel in the layer's conduct.

Upon completion of evaluation, the GLEL issues a **Layer Performance Report (LPR)** for each layer. All LPRs produced within a governance cycle are consolidated into a **System-Wide Evaluation Summary (SWES)**, issued at cycle end.

3.2 Governance Integrity Audits

The GLEL conducts independent integrity audits of governance body conduct, decision-making processes, and conflict-of-interest management. Integrity audits are conducted in accordance with the audit schedule defined in Section 6 and may be triggered at any time by a governance mandate or a material escalation of sufficient severity.

All audit findings are classified using the following three-tier taxonomy:

Classification	Definition	Governance Response Required
Clear	No material concerns identified. Governance body found to be operating with integrity and in compliance with applicable instruments.	None required. Finding recorded in GIAR.
Advisory	Minor concerns identified that do not constitute material failures but require monitoring and attention to prevent escalation.	Governance body to submit improvement plan within 20 working days.
Critical	Material concerns identified that represent a substantive failure of governance integrity, requiring immediate governance response.	Governance Integrity Alert (GIA) issued immediately. Full GIA protocol activated (see Section 7).

All audit findings — regardless of classification — are recorded in the **Governance Integrity Audit Register (GIAR)**, a version-controlled register maintained by the GLEL Secretariat. Critical findings simultaneously trigger the issuance of a **Governance Integrity Alert (GIA)**, transmitted directly to the highest deliberative authority within the governance framework.

3.3 Escalation Pattern Analysis

The GLEL reviews all escalation records across the governance stack to identify systemic patterns, recurring failure modes, and structural gaps that may not be visible at the individual-layer level. This function is distinct from the handling of individual escalations, which occurs within and between layers in real time. Escalation pattern analysis is a retrospective, systemic-intelligence function that examines the aggregate escalation record to discern architecture-level concerns.

The GLEL issues **Escalation Pattern Reports (EPRs)** on a quarterly schedule, identifying root causes of recurring escalation patterns and recommending structural or procedural remediation. EPRs are submitted to governance deliberative bodies and to Layer 7.

3.4 Cross-Discipline Output Evaluation

The GLEL evaluates the quality, utility, and governance impact of all Generative Output Certificate (GOC)-cleared outputs received from the Generative Layer (Layer 5). This function ensures that cross-discipline generative activity — a core value-delivery mechanism of the Δ CS framework — is producing demonstrable value proportionate to the governance resources and overhead it requires.

The evaluation considers:

10. The quality and coherence of cross-discipline outputs relative to the governance standards applicable at the time of generation;
11. The utility of outputs as assessed by receiving disciplines and governance bodies; and

12. The governance impact — whether the outputs have appropriately influenced governance decisions, escalation handling, or structural evolution of the framework.

The GLEL issues **Cross-Discipline Output Evaluation Reports (CDOERs)** each governance cycle, submitted to governance deliberative bodies and Layer 7.

3.5 Governance Cycle Close Review

At the close of each governance cycle, the GLEL convenes a full Cycle Close Review. This review synthesises all Layer Performance Reports, governance integrity audit findings, escalation pattern analyses, and cross-discipline output evaluations produced during the cycle into a single, authoritative **Governance Cycle Close Report (GCCR)**.

The GCCR is the primary governance accountability instrument of the Δ CS framework. It provides the governance deliberative bodies and Layer 7 with a complete, integrated account of governance system performance during the concluded cycle and forms the primary basis for structural governance decisions at cycle commencement.

The GCCR is submitted simultaneously to all governance deliberative bodies and to the Invitation/Exclusion Layer (Layer 7).

4. Structural Components

The following instruments constitute the formal output architecture of the GLEL. Each is a defined governance instrument with prescribed content, classification, distribution, and retention requirements.

Instrument	Description and Purpose
Layer Performance Report (LPR)	Per-layer structured performance evaluation produced each governance

Instrument	Description and Purpose
	cycle (mid-cycle and end-of-cycle). Contains performance rating, evidence summary, and recommendations. Signed by the Evaluation Director.
System-Wide Evaluation Summary (SWES)	Consolidated synthesis of all LPRs for a given governance cycle. Provides a system-level view of governance stack performance. Issued at cycle end. Submitted to governance deliberative bodies and Layer 7.
Governance Integrity Audit Register (GIAR)	A version-controlled, perpetual register of all completed governance integrity audits and their findings. Maintained by the GLEL Secretariat. Accessible to governance deliberative bodies and Layer 7 at all times.
Governance Integrity Alert (GIA)	A formal urgent governance instrument issued upon a Critical audit finding. Transmitted simultaneously to the Chair of the highest governance deliberative body, Layer 7, and the Governance Secretariat. Activates the full GIA Protocol (Section 7). Time-critical instrument.
Escalation Pattern Report (EPR)	Quarterly structured analysis of all escalation records across the governance stack. Identifies systemic failure patterns, root causes, and remediation recommendations. Submitted to governance deliberative bodies and Layer 7.
Cross-Discipline Output Evaluation Report (CDOER)	Per-cycle assessment of the quality, utility, and governance utility of all GOC-cleared generative outputs received from Layer 5. Submitted to governance deliberative bodies and Layer 7 at cycle end.
Governance Cycle Close Report (GCCR)	The comprehensive end-of-cycle synthesis instrument. Integrates all LPRs, audit findings, EPRs, and CDOERs into a single authoritative governance accountability document. Submitted simultaneously to all governance deliberative bodies and Layer 7. Primary basis for structural governance decisions at cycle

Instrument	Description and Purpose
	commencement.

5. Operating Principles

The following principles govern all GLEL activity. They are non-negotiable and bind all GLEL personnel, the Evaluation Director, the Integrity Audit Lead, and the GLEL Secretariat. In the event of conflict between operational convenience and a governing principle, the principle prevails without exception.

13. **Independence.** The GLEL operates independently of the layers it evaluates. No evaluated entity — whether a governance layer, a governance body, or a governance officer — may communicate with, influence, or apply pressure to GLEL evaluation personnel in relation to an active or pending evaluation. Any attempt to do so must be reported to the Evaluation Director immediately and recorded in the relevant LPR or audit file.
14. **Systemic View.** GLEL evaluation addresses architecture-level patterns and systemic performance. It is not an instrument of individual incident investigation. Where individual incidents are relevant, they are considered only insofar as they illuminate systemic conditions. The unit of analysis is always the governance architecture, not the individual actor.
15. **Proportionality.** Evaluation intensity is proportionate to the risk profile of the layer or governance body under evaluation and to its prior performance history. Layers with strong, consistent performance records receive lighter evaluation schedules; layers

flagged At Risk or with prior Advisory or Critical audit findings receive intensified evaluation engagement in subsequent cycles.

16. Transparency. All GLEL evaluation reports — including findings that reflect negatively on governance bodies or layers — are made available to all governance deliberative bodies and registered disciplines without redaction of material findings. GLEL findings are not withheld, summarised without substance, or selectively distributed to protect institutional interests.

17. Constructive Orientation. GLEL findings are oriented toward structural improvement, not institutional censure or punitive outcome. Every critical finding carries recommended remediation pathways. Every At Risk layer performance rating carries specific, actionable improvement recommendations. The purpose of evaluation is to strengthen the governance system, not to record failure.

18. Non-Interference. The GLEL does not manage, instruct, direct, or intervene in the operations of any lower governance layer during an active evaluation. It observes and reports only. GLEL evaluation personnel have access to records, disclosures, and structured input processes; they do not have authority to direct operational decisions, override layer protocols, or assume governance functions. Any observation of a situation requiring immediate governance intervention is escalated through the GIA protocol or to Layer 7, not managed directly by the GLEL.

6. Evaluation Protocol

6.1 Layer Performance Evaluation

Protocol Element	Specification
Schedule	Mid-cycle and end-of-cycle for each governance layer (Layers 1–7)
Method	Document review; record analysis; structured stakeholder input (written submissions from registered disciplines and governance bodies)
Evaluation Criteria and Weighting	Functional delivery — 40% Protocol adherence — 25% Escalation responsiveness — 20% Stakeholder confidence — 15%
Performance Rating Scale	Exemplary — substantially exceeds all criteria Satisfactory — meets all or most criteria without material deficiency Needs Improvement — meets some criteria; material deficiencies identified At Risk — fails to meet criteria in a manner that jeopardises governance integrity
Outcome Instrument	Layer Performance Report (LPR) — signed by the Evaluation Director; containing rating, evidence summary, and recommendations
Escalation Trigger	At Risk rating triggers immediate recommendation to governance for structural intervention (see Section 11)

6.2 Governance Integrity Audit

Protocol Element	Specification
Schedule	Annual for all governance bodies (scheduled); triggered at any time by governance mandate or material escalation
Conducted By	Integrity Audit Lead, operating independently of the Evaluation Director

Protocol Element	Specification
Method	Independent review of: decision records and meeting records; conflict-of-interest disclosures; process compliance documentation; and, where applicable, financial administration records
Finding Classification	Clear / Advisory / Critical (as defined in Section 3.2)
Outcome Instrument	Audit finding recorded in GIAR; Advisory findings accompanied by improvement plan requirement; Critical findings trigger GIA Protocol (Section 7)

6.3 Escalation Pattern Analysis

Protocol Element	Specification
Schedule	Quarterly
Method	Statistical and qualitative analysis of all escalation records across the governance stack (Layers 1-7) for the preceding quarter
Analysis Scope	Escalation frequency by layer; resolution rates and timeframes; recurring escalation categories; cross-layer escalation pathways; and unresolved or stalled escalations
Outcome Instrument	Escalation Pattern Report (EPR) identifying patterns, root causes, structural gaps, and remediation recommendations

6.4 Cross-Discipline Output Evaluation

Protocol Element	Specification
Schedule	End-of-cycle, once per governance cycle
Method	Structured review of all GOC-cleared

Protocol Element	Specification
	outputs received from Layer 5 during the cycle; stakeholder utility assessment; governance impact mapping
Evaluation Dimensions	Output quality and coherence; utility to receiving disciplines; governance decision impact; proportionality of governance investment
Outcome Instrument	Cross-Discipline Output Evaluation Report (CDOER), submitted to governance deliberative bodies and Layer 7

7. Governance Integrity Alert Protocol

The Governance Integrity Alert (GIA) is the highest-urgency formal instrument within the GLEL's output architecture. It is issued exclusively upon the confirmation of a Critical audit finding by the Integrity Audit Lead. The following protocol governs its issuance, transmission, and resolution.

Activation Condition

The GIA Protocol is activated upon formal confirmation by the Integrity Audit Lead that an audit finding meets the Critical classification threshold. Confirmation is a formal act, recorded in the GIAR with a timestamp. GIA issuance is mandatory upon confirmation; it is not discretionary.

19. **GIA Drafting (Day 1–2).** Upon confirmation of a Critical finding, the GLEL evaluation team drafts the Governance Integrity Alert within two working days. The GIA must include: the identity of the governance body subject to the finding; a clear statement of the Critical concern; the evidentiary basis for the

classification; and the GLEL's initial recommended remediation pathway. The GIA is signed by both the Integrity Audit Lead and the Evaluation Director.

20. GIA Transmission (Day 2). The completed GIA is transmitted simultaneously to:

Transmission is effected by the GLEL Secretariat and confirmed in writing. No GIA may be transmitted to a subset of these recipients; simultaneous transmission to all three is mandatory.

1. The Chair of the highest governance deliberative body;
2. The Governance-Level Invitation/Exclusion Layer (Layer 7); and
3. The Governance Secretariat.

21. Acknowledgement (by Day 5). The governance deliberative body must formally acknowledge receipt of the GIA within three working days of transmission.

Acknowledgement is a formal governance act, recorded by the GLEL Secretariat. Failure to acknowledge within three working days is itself a reportable governance concern, noted in the GIAR and reported to Layer 7.

22. Response Plan (by Day 12). A substantive response plan addressing the Critical finding must be submitted to the GLEL by the governance deliberative body within ten working days of GIA transmission. The response plan must identify: accountable governance officers; specific remediation actions; timelines for each action; and the mechanism by which completion will be evidenced.

23. Monitoring and Reporting. Upon receipt of a response plan, the GLEL monitors implementation progress. Implementation status is reported in the next Governance Cycle Close Report (GCCR) and in each subsequent GCCR until the GLEL confirms that the Critical finding has been satisfactorily remediated. The GIAR entry is updated to reflect each stage of the response.

24. Escalation on Non-Response. If a response plan is not received within ten working days of GIA transmission, the GLEL immediately escalates to Layer 7, invoking the emergency structural review pathway (see Section 11).

8. Interaction Rules

8.1 Inputs to the GLEL

The GLEL receives formal inputs from the following sources:

25. **All governance layers (Layers 1-5)** — via LPR data submissions, escalation records, and performance documentation submitted at evaluation intervals;
26. **The Generative Layer (Layer 5)** — via GOC-cleared output packages submitted each governance cycle for cross-discipline output evaluation; and
27. **Governance deliberative bodies** — via governance mandates authorising triggered integrity audits and integrity-trigger requests arising from governance deliberation.

8.2 Outputs from the GLEL

GLEL evaluation outputs flow to the following recipients:

Recipient	Instruments Received
Governance Deliberative Bodies	All evaluation reports: LPRs, SWES, GIAR access, GIAs, EPRs, CDOERs, and GCCRs
Invitation/Exclusion Layer (Layer 7)	GCCR, GIAs, SWES, and structural recommendations arising from evaluation findings
All Layers (1-5)	Their respective LPR performance ratings and improvement recommendations
GLEL Secretariat (internal)	All instruments for registration, version control, and distribution

8.3 Interaction Constraint

Fundamental Constraint

The GLEL does not issue directives to operational layers. It does not manage layer personnel, override layer decisions, or intervene in layer operations. All GLEL outputs are findings and recommendations only. Governance response to GLEL findings is the responsibility of governance deliberative bodies and, where appropriate, Layer 7. The GLEL has no executive authority over any layer it evaluates.

9. Cadence and Review

Instrument / Activity	Frequency
Layer Performance Reports (LPRs)	Mid-cycle and end-of-cycle (per layer)
System-Wide Evaluation Summary (SWES)	End-of-cycle
Cross-Discipline Output Evaluation Report (CDOER)	End-of-cycle
Governance Integrity Audits	Annual (scheduled); at any time (triggered)
Escalation Pattern Reports (EPRs)	Quarterly
Governance Cycle Close Report (GCCR)	End-of-cycle
Governance Integrity Alerts (GIAs)	As required (upon Critical audit finding confirmation)
GLEL Self-Evaluation	Annual — conducted by an independent panel appointed by Layer 7

The GLEL self-evaluation is the mechanism by which the GLEL's own conduct, independence, and effectiveness are assessed. The self-evaluation

panel is appointed exclusively by the Invitation/Exclusion Layer (Layer 7) and operates independently of all GLEL personnel. The panel's findings are reported to Layer 7 and to governance deliberative bodies. GLEL personnel may not participate in the panel's deliberations.

10. Roles and Accountabilities

Role	Responsibilities and Accountabilities
Evaluation Director (ED)	Leads the GLEL in all evaluation functions. Signs all LPRs, GIAs, EPRs, CDOERs, and GCCRs as the accountable evaluation authority. Accountable directly to governance deliberative bodies. Responsible for ensuring GLEL independence is maintained at all times. Recuses from any evaluation function where a conflict of interest exists. Must not be a serving member of any governance body under evaluation.
Evaluation Analysts (minimum two per cycle)	Conduct layer performance evaluations in accordance with the protocols defined in Section 6. Prepare draft LPRs and supporting documentation for Evaluation Director review and sign-off. Provide analytical support to EPR and CDOER production. Report to the Evaluation Director.
Integrity Audit Lead	Conducts all governance integrity audits independently of the Evaluation Director. Has sole authority to classify audit findings (Clear, Advisory, or Critical). Responsible for maintaining the objectivity and rigour of the audit process. Co-signs GIAs with the Evaluation Director. Reports findings directly to governance deliberative bodies on Critical matters without requiring Evaluation Director concurrence for transmission. Must

Role	Responsibilities and Accountabilities
	have no functional relationship with any governance body under audit.
GLEL Secretariat	Manages the document registry for all GLEL instruments. Maintains the GIAR in version-controlled form. Coordinates report distribution to all designated recipients. Manages GIA transmission logistics and confirms transmission in writing. Maintains the GLEL cadence schedule and provides advance notice of upcoming evaluation obligations to relevant parties. Accountable to the Evaluation Director for administrative functions and to the Governance Secretariat for records-management compliance.

11. Escalation Pathways

The following escalation pathways are activated automatically upon the specified trigger conditions. They are mandatory; no discretion is exercised in their activation once a trigger condition is confirmed.

Trigger Condition	Mandatory Escalation Action
Layer performance rating of At Risk in any LPR	Evaluation Director issues immediate recommendation to governance deliberative bodies for structural intervention. Recommendation is included in the LPR and transmitted separately to governance deliberative bodies and Layer 7 without awaiting cycle end.
Critical GIA with no governance response plan received within 10 working days	GLEL escalates immediately to the Invitation/Exclusion Layer (Layer 7), invoking the emergency structural review pathway. Escalation is transmitted by the Evaluation Director in writing, with a full record of the

Trigger Condition	Mandatory Escalation Action
	GIA, transmission confirmation, and absence of governance response.
EPR identifies systemic escalation patterns indicating structural governance failure	GCCR flags the pattern for Layer 7 action. If pattern is identified in an EPR that falls between GCCRs and the severity warrants, Evaluation Director may transmit an interim structural concern notice to governance deliberative bodies and Layer 7 without awaiting cycle end.
GLEL self-evaluation finds material concerns about GLEL independence or conduct	Self-evaluation panel transmits findings directly to Layer 7 for structural response. Layer 7 determines appropriate remediation, including possible reconstitution of GLEL leadership, independently of GLEL personnel.

12. Amendment Conditions

This instrument may be amended only in accordance with the following conditions. Amendments not made in accordance with these conditions are of no effect and are recorded as irregular in the GIAR.

Amendment Subject	Amendment Authority and Conditions
GLEL evaluation criteria (Section 6)	Amended by governance supermajority only, following a mandatory GLEL review period of no less than 30 calendar days during which the GLEL may submit a formal evaluation of the proposed amendment.
Audit methodology (Section 6.2)	Amended by the Integrity Audit Lead, with Evaluation Director concurrence, subject to formal governance confirmation. Governance confirmation must be recorded in the

Amendment Subject	Amendment Authority and Conditions
	governance deliberative body's official minutes.
GIA Protocol (Section 7)	Amended by governance supermajority only. No amendment to the GIA Protocol may reduce the obligations of governance bodies to acknowledge or respond to GIAs, or extend the timelines specified in Section 7.
GLEL self-evaluation panel appointment process (Section 9)	Defined and amended exclusively by the Invitation/Exclusion Layer (Layer 7). GLEL personnel have no role in the definition or amendment of this process.
Roles and Accountabilities (Section 10)	Amended by governance supermajority following GLEL review and recommendation.
Escalation Pathways (Section 11)	Amended by governance supermajority only. No amendment may remove or weaken any mandatory escalation trigger.
This Amendment Conditions section (Section 12)	Amended by governance supermajority and with the concurrence of Layer 7. Amendment of this section requires the highest amendment threshold in the Δ CS governance framework.

All amendments must be recorded in the Document Revision Log (maintained by the GLEL Secretariat), assigned a new version number, and distributed to all governance deliberative bodies and registered disciplines within 10 working days of coming into effect.

Authority and Execution

This instrument — Δ CS-GOV-L6-GLEL, Version 1.0 — is issued under the authority of the Δ CS Governance Deliberative Body and takes effect as of

the Effective Date stated on the document face. It is binding upon all governance layers, governance bodies, governance officers, evaluation personnel, and registered disciplines within the ΔCS framework from the Effective Date.

Executed By	Capacity
	Chair, ΔCS Governance Deliberative Body
	Evaluation Director, GLEL
	Representative, Invitation/Exclusion Layer (Layer 7)

Signatures are to be applied to the executed hard-copy or formally certified electronic version of this instrument. This document carries no binding effect until all three signatory positions are completed and the executed version is registered by the GLEL Secretariat.

Document ID: ΔCS-GOV-L6-GLEL | **Version:** 1.0 | **Status:** Active |
Classification: Governance Framework — Restricted

Revision Tracking Guidance: All amendments to this instrument must be assigned an incremented version number (e.g., 1.1, 1.2 for minor amendments; 2.0 for substantive restructuring). Each version must record: version number; effective date; sections amended; amendment authority invoked; and the name and capacity of the authorising officer. The GLEL Secretariat maintains the authoritative Document Revision Log. Prior versions are retained in the document registry and remain accessible to governance deliberative bodies and Layer 7 upon request. No version of this document may be destroyed, altered post-execution, or withheld from governance bodies entitled to access it.

ΔCS — Triangulated Coherent Systems Governance Framework. Issued July 2026. Next scheduled review: July 2027.
